EXPERIENCE

Front-End and UI Developer

November 2013 – August 2014

Senitron Corp. – Los Angeles, CA

Senitron is a leading developer for RFID (radio frequency identification) software and hardware, with a focus on inventory visibility and tracking

Developer lead for user interface of multiple web applications used for tracking inventory in real-time (HTML/CSS/jQuery)

Part of a development team involved in building a repeatable process for running servers and applications in large RFID installations (Linux/Ruby/Rails/PostgreSQL)

Developed testing software and managed equipment installation in one of the largest inventory-tracking implementation

Created 3-D renderings for prototype RFID hardware

Web Designer

May 2013 – October 2013

Pin Agency – Glendale, CA

Pin Agency is a professional team of web designers and developers focused on online marketing, e-commerce, and design

Project manager for a remote developer team (Basecamp/JIRA/Git)

Design lead for new and existing website and e-commerce projects

Web, Graphic, and Product Designer

September 2011 – October 2012

Chromologic LLC – Pasadena, CA

Chromologic is a biotechnology company focused on the research, development, and commercialization of next generation diagnostic technology

Design lead for web-based application (DTEK app) successfully deployed to major prime contractors including Boeing and the United States Border Patrol for use in supply chain security and counterfeit mitigation

Involved in redesigning an existing commercial product (DTEK product) as part of a development team resulting in a decrease in BOM cost and improved usability

Created a company-wide brand standard for use in internal and external communication material
