EXPERIENCE

Front-End and UI Developer   November 2013 – August 2014

Senitron Corp. – Los Angeles, CA

Senitron is a leading developer for RFID (Radio Frequency IDentification) software and hardware with a focus on inventory visibility and tracking

- Developer lead for user interface and user experience of multiple web applications used for tracking inventory in real-time (HTML/CSS/jQuery with Ruby/Rails/PostgreSQL backend)
- Part of a development team involved in building a repeatable process for running servers and applications in large RFID installations
- Developed testing software and managed equipment installation in one of the largest RFID inventory-tracking implementations
- Created 3-D renderings for prototype hardware

Web Designer   May 2013 – October 2013

Pin Agency – Glendale, CA

Pin Agency is a professional team of web designers and developers focused on online marketing, e-commerce, and design

- Design lead for new and existing website and e-commerce projects
- Project manager for a remote developer team (Basecamp/JIRA/Git)

Web, Graphic, and Product Designer   September 2011 – October 2012

Chromologic LLC – Pasadena, CA

Chromologic is a biotechnology company focused on the research, development, and commercialization of next generation diagnostic technology

- Design lead for web application successfully deployed to major U.S. prime contractors for use in supply chain security and counterfeit mitigation
- Involved in 3D redesign an existing commercial product resulting in a decrease in bill of materials cost, improved usability, ergonomics and aesthetics
- Created company-wide brand standard for use in internal and external communication material
